10. Other: <u>See Continuation Sheet</u>		Styhun Arvan Estephen Husar Primary Examiner					

Continuation of 10. Other: : Applicant's arguments assert that "the plurality of reflective sub-areas" are" obliquely oriented with respect to eachother". In applican'ts 3 figures there is no showing that the subreflective areas are obliquely oriented with respect to eachother, but seem parallel in orientation, particularly figure 2. Furthermore, there is no support in the specification for this limitation. The only teaching of obliqueness of the reflective sub areas that is taught by the specification is not with respect to their structural orientation but with respect to the manner in which they reflect light (pp. 6 lines 12-18) "as illustrated in Figure 2, the reflecting surfaces of which are intended to reflect the light in different directions (preferably all oblique)". The abovementioned limitation added in response dated 07/08/2003 is new matter not supported by the specification, primarly, and therefore remains rejected under Sato as stated in the Final Rejection.
